

A NEW DISTRIBUTION AGREEMENT IN ITALY: Eurosyn S.p.A. and Carlo Riccò & F.II S.p.A.

The Italian industrial fabric has always been characterised by the fragmented distribution of small and medium-sized companies; in this context, collaboration between manufacturers and distributors is decisive to guarantee optimal coverage of the territory. For this reason, we are happy to announce a new distribution contract signed between two Italian companies, and what's more, both family-run: Carlo Riccò e F.II S.p.A. and Eurosyn S.p.A.

The agreement between Carlo Riccò & F.II & Eurosyn establishes a new collaboration for the unsaturated polyester resin range in the regions of Lombardy, Piedmont and Valle D'Aosta in Italy.

Eurosyn is able to offer its customers technical and legislative support, an extensive logistical and commercial coverage of the territory, and a product portfolio that is synergistically completed as a result of this collaboration.

The announcement of this agreement represents the starting point of a path filled of success and satisfaction.

Eurosyn S.p.A. company profile

Eurosyn S.p.A. is a family-owned company that has been engaged in the distribution of specialty chemicals for specific industrial sectors since 1983.

Over the years, the growing expectations of suppliers - some of the leading raw material producers - and customers have pushed the company to reformulate its operating model, enriching our offer with services related to logistics, formulation and regulatory assistance.

Carlo Riccò & F.II S.p.A. company profile

Carlo Riccò & F.II S.p.A. is a chemical company that has been producing and developing new unsaturated polyester resins since 1955.

Carlo Riccò & F.II offers a very wide range of resins, with or without styrene, and accessories. In addition to mastering the art of traditional orthophthalic and isophthalic resins, the company has over the years developed leading expertise in DCPD resins and has expanded to include bisphenolic, aliphatic and hybrid vinylester products. The portfolio is divided into multiple versions according to the technology used by customers, e.g. infusion, pultrusion, RTM, and the type of curing, e.g. cold, hot, UV, LED.

On the certification side, the company has invested in the marine and wind power sectors, obtaining numerous approvals from Lloyd's and DNV.

The production of resins with a low styrene content and emission and the use of raw materials produced from renewable sources in increasing proportions allows the company to give unique characteristics to materials and improve the sustainability of finished products.

Among the most established sectors served are composites or reinforced plastics, sanitaryware, mastics and fillers, marine, synthetic stone, abrasives, relining and artistic casting.
